

Schaerer Coffee Factory

Greeting the many new faces of coffee pleasure.

The Fresh Milk Family

Creamy cappuccino and delicious latte macchiato beverages at the press of a button. One model allows you to store the milk in a milk cooler inside the machine where it can be efficiently kept cool according to the strictest hygienic standards. An additional refrigerator can be placed beside the unit if you need larger supplies of fresh milk. The standard machine is equipped with 2 grinders. The 500 g or 1,000 g bean containers are easy to refill, disassemble and clean.

The Milk Powder Family

This version is ideally suited to an office environment, as a self-service option or wherever the milk powder option is preferred. Milk powder and cocoa powder can also be combined using the handy twin-container attachment.

The Advantages at a Glance

Design

This compact and fully automatic coffee machine wins the admiration of all who see it (as it did the Red Dot Design Award) thanks to its clear lines, its slender stature (a width of only 550 mm) and especially thanks to its ultimate user friendliness. But go ahead have a look for yourself ...

Fresh Milk Version
Perfect milk foam and delicious coffee and cocoa beverages of outstanding quality at the press of a button. You'll be enthralled.

Milk Compartment Option
Hygienic storage of the fresh milk container - stowed in a clean and space-saving manner in a specially designed milk compartment.

Powder Milk Version
Ideal location for this hygienic model: offices and all self-service areas.

Milk Powder
You achieve top cappuccino quality with high-quality milk powder.

Twin Topping
In order to enable you to fully enjoy the whole range of beverages, a twin container is available for this milk powder model, allowing you to use both milk powder and cocoa powder.

Slender Construction
The machine takes up only slightly more space on your counter than the width of an A4 sheet (550 mm). Therefore, 2 machines will fit easily on the smallest of counters.

Perfect Design
The Coffee Factory fits in seamlessly with the other members of the Schaerer product family - thanks to the waveform design of its side elements and its carefully conceived individual components such as the detachable coffee bean containers.

Intuitive Operation
The special design of the drip grille automatically ensures accurate cup positioning under the coffee spout.

Lighting Options
Two lighting options will make this machine a real jewel in your shop: icy blue or amber.

Adjustable Spout
From the smallest espresso cup to the largest coffee mug. The spout's unique height adjustability (from 70 - 200 mm) enables you to easily fill any cup or mug.

Detachable Bean Containers
Regular cleaning of the bean containers helps you to achieve continuously high coffee quality. An ingenious mechanism makes it easier for you to detach and re-attach the containers.

Smart Labelling
An insert device in the front enables you to do your own product labelling. The accompanying template is available for downloading at our website (www.schaerer.com).

Product Variety

Coffee Specialities
Authentic Italian espresso, fashionable latte macchiato, exquisite hot chocolate: you select your favourite products and let the Coffee Factory execute your orders at the press of a button.

Hot Chocolate with Milk
Hot chocolate, espresso-based moccacino: the available fresh milk and coffee combinations ensure that all of your beverage creations will be a hit.

Smart Coffee Factory
If you change the amount of coffee, all of the other parameters will be adjusted fully automatically. For consistently excellent coffee.

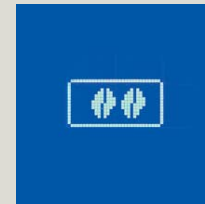

Operation & Cleaning

Self-explanatory Display
The user is guided through all of the machine's applications via a touch display that issues clearly comprehensible instructions. This also facilitates simple installation by the user.

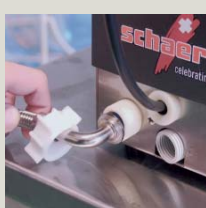

Pre-heating Option
You can pre-heat the main coffee ingredients by pressing the "Pre-heat" button. This ensures that the very first espresso will run into the cup at the right temperature.

The New "Barista" Button
Would you like to adjust the strength of your next cup of espresso or coffee? Simply make the corresponding selection on the touch screen.

Fresh Water Tank Version
Thanks to its large integrated 4.5 litre water tank, this machine may be entirely self-contained. Waste water is collected in the drip tray as standard.

Mains Water Connection
If the 4.5 litre water capacity is insufficient, then mains water connection may be ordered as an option. A mains water machine may also be ordered as standard. Waste water can be contained in the drip tray as standard or disposed of by means of an optional drain connection.

Large Coffee Grounds Container
The easily accessible, centrally located coffee grounds container has the capacity to hold around 50 cakes. Under-counter coffee grounds disposal unit also available.

Fully Automatic Cleaning
The regular and fully automatic cleaning and decalcification cycles are executed at the press of a button. You save time and reduce your operation and maintenance costs.

Maintenance Made Easy
The unique, three-phase maintenance concept saves time and money. The simple design enables you to carry out all basic maintenance tasks, which means that you avoid the expense of service calls.

The Price is Right
A large range of available product features, high-quality individual components and a price that is unique for the machine's performance class leaves nothing to be desired.
